1. Controller Description

GTR-117 is a multi-function diesel engine generator controller. It applies with 3 buttons and provides 3 kinds of operation mode: Manual, Auto, Off. No special training is required due to the easy operation. Fault protection includes: Emergency stop, Over speed, High water temperature, Low oil pressure, Low frequency, Aux. input 1 and Over crank. GTR-117 also displays the low battery voltage warning, and indicates the running status, speed status and power status. GTR-117 equips with high firm continental-type terminal that provides easy plug in and removal. Furthermore, GTR-117 has 10 pins Dip switch for adjusting parameter according to system requirements, and make it not only reducing stock but also meeting the various system specifications. GTR-117 build-in 5 output powers relays which perform high power capacity reach to 5 Amp (DC) that saves the wiring for connection with extra power relays. No matter in function, protection or operation performance. GTR-117 is your best choice.
